Veza for Healthcare

Improve patient and physician experience, reduce risk,
and automate compliance

🔍 **Authorization Graph**   Works for both human and machine accounts

Users	Groups	Roles	Permissions	Resources
Dustin Henderson	Sales	aws Admin-User-Role	Create, Write, Update	Customer-Data
Mike Wheeler	Engineering	Sales-Read-Only	Create, Delete	Revenue-Facts
Jim Hopper	Finance		Read, Write	Code-Repo
Will Byers				Account-List
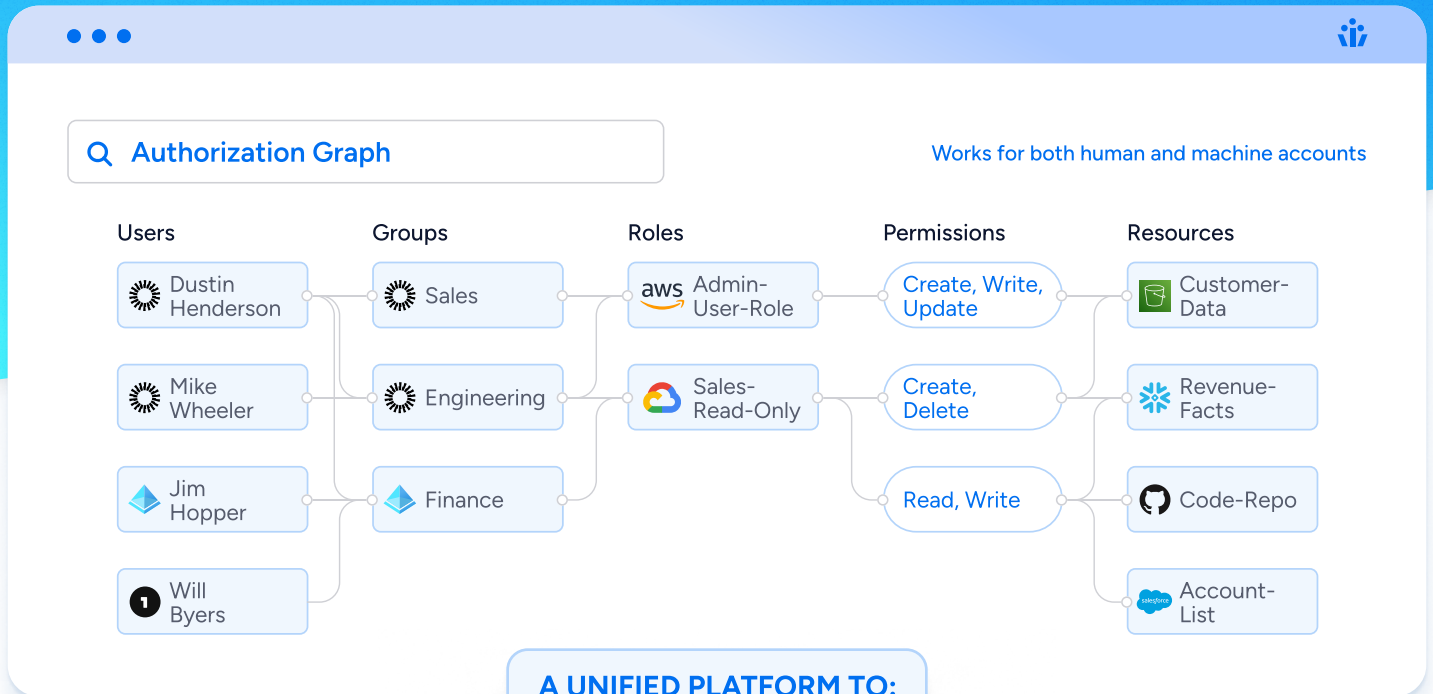

A UNIFIED PLATFORM TO:

Visualize and control every user's access to every system

Simplify audit preparation

Automate user onboarding & offboarding

"

"One of the tangible benefits for using Veza was allowing us to secure our quarterly audits, identifying the data assets and their relative data access. What once had taken weeks we were able to do with Veza in minutes."

Scott Brode, Director of Quality Assurance, PayNearMe

Improve patient and physician experience

Avoid the frustration of healthcare providers being unable to access critical systems. Make sure that every healthcare provider can access patient records, write prescriptions, and dispense medications in any clinical location where they need to work.

Reduce data breach risk

Uncover, clean up, and prevent risky access. Disable dormant accounts, revoke unused permissions, and automate user onboarding and offboarding, so you can reduce your attack surface, and minimize potential blast radius.

Avoid audit deficiencies and material weaknesses

Streamline audit preparation for HIPAA, Joint Commission, Medicare/Medicaid, financial audits, and state programs with Veza's automated access reviews that are up to 7X faster than spreadsheets. Enable business stakeholders to make informed access decisions with Veza's translation of esoteric system-specific permissions into common terms like create, edit, update, delete.

200+ integrations

Connect to any system with the Veza Open Authorization API (OAA) or choose from 200+ pre built integrations with EHR systems, identity providers, cloud IAM, SaaS apps, on-prem apps, custom apps, and data systems to visualize, manage, and control access across your whole enterprise.
