

Veza Integrations

200+ out-of-the-box integrations

Veza provides 200+ out-of-the-box integrations that pull metadata from identity systems, cloud service providers, data systems, and on-prem applications to reveal the effective permissions to your most critical data.

Key Benefits

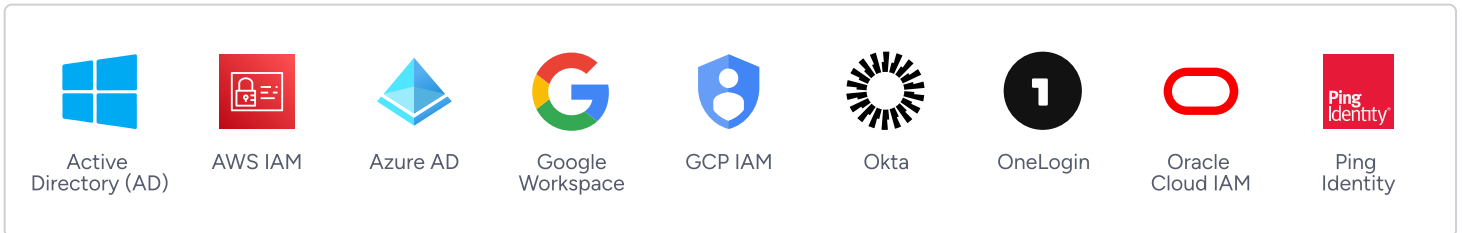

- ✓ **Rapid Deployment**
 Configure most integrations in less than 15 minutes.
- ✓ **Broad Coverage**
 Out-of-the-box Integrations for critical systems spanning identity providers, cloud providers, SaaS apps, data lakes, and on-prem applications.
- ✓ **Read-Only Integrations**
 Over 95% of integrations require only read-only access.
- ✓ **Out-of-Band Deployment**
 Avoid the risk of service interruptions inherent to inline solutions.
- ✓ **Flexibility**
 Rapid integration with custom applications using Open Authorization API or SCIM.

Key Features

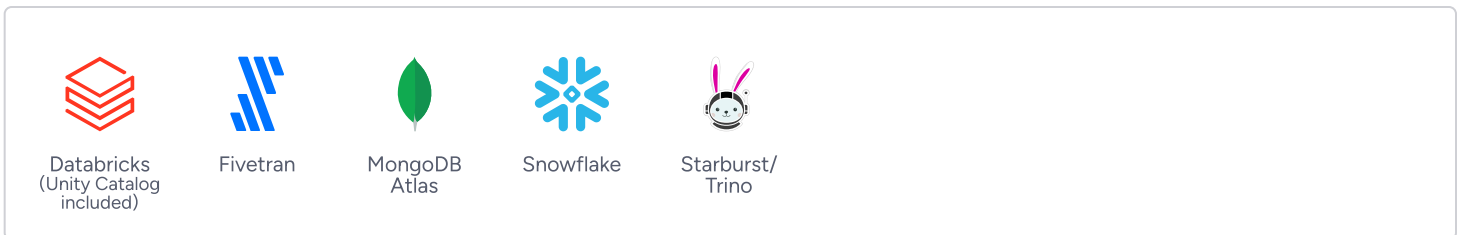

- 🔑 **Over 200 Integrations**
 Off-the-shelf integrations require no custom development to connect to your systems.
- 🔑 **Open Authorization API (OAA)**
 Veza's Open Authorization API allows for rapid development of integrations for custom applications without the need for expensive professional services engagements.
- 🔑 **SCIM Support**
 Connect to an application's System for Cross-domain Identity Management (SCIM) API endpoints to extract User and Group authorization metadata directly.
- 🔑 **Self-Service Data Import**
 Import data directly into your Veza tenant when direct API access is unavailable.

Open Authorization API for custom apps & systems

Veza's Open Authorization API (OAA) is a set of APIs that allow customers to integrate any system (custom applications, in house applications, custom identity systems, etc.) with the Veza Authorization Platform. Customers have integrated hundreds of custom in-house systems into Veza using OAA.

Veza OAA Solution Brief available [here](#).
